

DRUG DELIVERY EXPERTS OPENS R&D LABORATORY IN SAN DIEGO, CA AND ANNOUNCES SENSULIN AS FIRST CO-LOCATED COMPANY AND PARTNER FOR VIRTUAL R&D.

San Diego, CA, June 20, 2014 – Drug Delivery Experts had its grand opening this week with visits from local industry leaders including Dan Bradbury of BioBrit LLC, former CEO of Amylin, Joe Panetta, CEO of Biocom, local biotechnology industry organization, and Phil Blair and Mel Katz, CEO and Executive Officer of Manpower San Diego, the largest local staffing agency, and many others.

Drug Delivery Experts works with partners to establish a virtual R&D team, and brings to its clients a significant experience in developing and commercializing biopharmaceuticals in delivery systems and devices. “We are pleased to launch our new business model in the midst of BIO and welcome out of town visitors on Sunday and Thursday afternoon, prior to and after the BIO meeting in San Diego” said Christopher A. Rhodes, CEO, Drug Delivery Experts. “We are fortunate to have Sensulin on board as our first co-located and partner company and will run R&D for Sensulin from within the lab at Drug Delivery Experts.”

Sensulin is developing a glucose-responsive insulin for type 1 and type 2 diabetes, with the goal of creating a 24 hour insulin to eliminate the need for separate basal and mealtime injections. “Sensulin established the lab with Drug Delivery Experts to take advantage of the deep drug delivery experience and network that our CTO, Chris Rhodes, brings to Sensulin”, added Mike Moradi, CEO, Sensulin.

Dan Bradbury stated “I have had the opportunity to work with Chris for many years and am excited about his new venture. The deep expertise in peptide and protein product and drug development that Drug Delivery Experts brings to the San Diego biopharmaceutical industry is invaluable”.

Joining BIOCUM was recommended by local business colleagues, said Chris Rhodes, but he was skeptical at first of the value for a small start up company. “I am so glad we decided to join BIOCUM, because the negotiated discounts with vendors has resulted in immediate and significant savings on our first orders of consumable supplies”. Joe Panetta added that “this is the value that we can bring to many different types of local biotechnology and pharmaceutical companies”. “We are pleased to see another company started by a former Amylin executive and we welcome Sensulin to San Diego”.

ABOUT DRUG DELIVERY EXPERTS: Drug Delivery Experts is an incubator of technologies, companies, and people, with common interests in biopharmaceutical formulation, delivery, and device systems product development. The R&D Laboratory specializes in integrating molecular properties with formulation, delivery, and device systems to optimize market potential through patient-friendly products.
