

CHRISTOPHER A **RHODES** & ASSOCIATES

The Pharmaceutical Technology Specialists

Consulting, Advisory, Interim Management

Pharmaceutical Product Development

Combination Products, Delivery, Device

Technical Assessment and Due Diligence

Life Cycle Management and Portfolio Strategy

We specialize in **drug-device combination product development**, and integration with commercial strategy and life cycle plans. Our experts each leverage more than twenty years of experience in research, development, new product planning, and commercialization.

Our firm provides **expert consultancy** to facilitate the most effective translation from research through clinical development, with a key focus on integration of the delivery system with the development program to enhance the product profile and maximize commercial potential.

Clients include drug delivery, device, pharmaceutical, biotechnology, generic, specialty pharmaceutical, venture, and private equity firms interested in capitalizing on the value of pharmaceutical technology to enhance or enable product options.

A selection of recent **projects** includes product development of pre-filled syringe, auto-injector, transdermal, oral, nasal, pulmonary, and ocular delivery systems, due diligence for license, acquisition, and venture investments, portfolio strategy, and intellectual property strategy.

We have worked across virtually all therapeutic areas and delivery technologies, at both pharmaceutical companies and drug delivery providers. We bring a unique perspective to your project, as we understand the value proposition for each partner. Our central focus is on creating the right product for the patient population and market opportunity. Talk to us about your challenges. We will work with your team or put one together to meet your needs.
